Making the most of digital approaches to mental health and wellbeing in schools

20th June 2024

Professor Helen Pote

h.pote@rhul.ac.uk

Digital Mental Health in Schools

www.digitalhealthskills.com

1. Mental Health of young people
2. Why schools might help
3. EdTech & digital mental health interventions
4. Two examples from RHUL
5. Barriers and facilitators to using digital mental health tools in schools

Youth mental health problems are on the rise

NHS Digital
2023

£7%

1 in 9

1 in 5

8-25yrs

Young people with mental health problems are having a hard time in school...

5x more likely to have been bullied in-person or online

3x more likely to find extra-curriculars or socialising with friends unaffordable

Compared to peers without mental health problems

NHS Digital, 2023

What is a school?

What type of school did you attend?

How much did you enjoy learning?

How much did you enjoy the social side of school?

How connected did you feel to the school as a community?

What do you remember about the school's provision for social, emotional and mental health needs?

HOW have these experiences shaped your views about the ways mental health support might be provided in school?

Can schools support mental health?

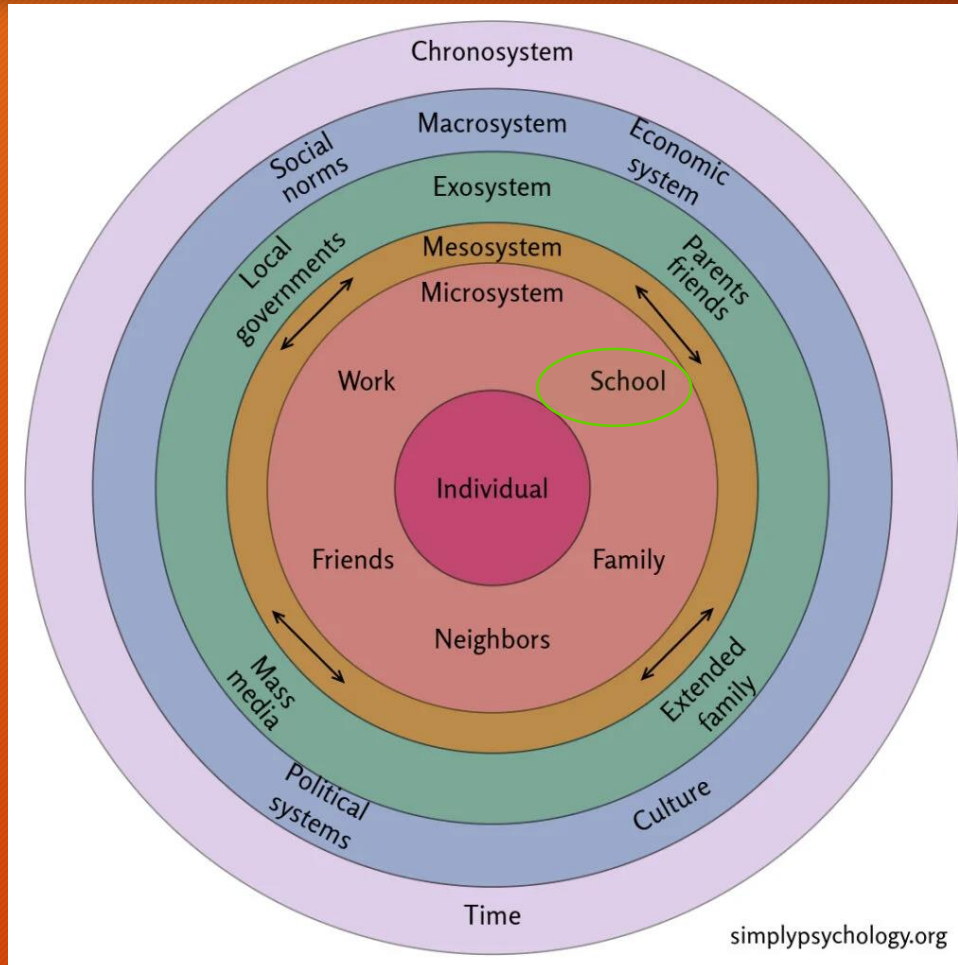

Schools are ...

“an immersive social experience as well as centres of learning, and can support the development of good social, emotional and mental health. Schools have the potential to offer a nurturing and protective environment for CYP in the most adverse circumstances”

Picciotto, Hickey & Barnet (2024)

Child Mental Health: Complex ecosystems of risk and protective factors

Bronfenbrenner's Ecological Systems Theory (1979)

Mental health & psychological interventions in schools

- A long history of various practitioners supporting mental health in schools
 - Teachers
 - Special educational needs co-ordinators
 - Counsellors
 - Educational Psychologists
 - Clinical Psychologists
 - Education Mental Health Practitioners
- Work spans the health and education systems
- The core task of any school - learning and development - may not always align with the mental health and wellbeing needs of the child

Mentally Health Schools - 8 Principles (2021)

an ethos and environment of respect, valuing diversity

leadership and management champions promotion emotional health and wellbeing

staff development to support their pupils/own wellbeing

curriculum teaching and learning to promote resilience and support social and emotional learning

enabling student voice to influence decisions

identifying the need for and monitoring the impact of interventions

targeted support and appropriate referral

working with parents and carers

What does mental health support in schools look like?

What is your image of how we should support young people with their mental health needs in schools?

Does it involve in-person support from adult to child, peer to peer?

Does it involve digital support (an app, an online session, a computer game) as a supportive option for young people ?

Why not?

Anxiety that technology is bad for kids is not new...

- Calculators
- TV
- Ebooks
- Computers
- Phones
- AI

Ban under-threes from watching television, says study
Doctors should curb amount of time children spend watching television to prevent long-term harm, say paediatricians

Children's obsession with the television, computers and screen games is causing developmental damage, warn experts. Photograph: Rob Watkins/Alamy
Doctors and government health officials should set limits, as they do for alcohol, on the amount of time children spend watching screens - and under-threes should be kept away from the television altogether, according to a paper in an influential medical journal published on Tuesday.

Most e-books harm children learning to read, research finds, as technology distracts from stories
Digital books including games at the end of chapters were found to have particularly negative effects on young children's learning

Dominic Patten

Harnessing the power of digital for mental health in schools

- We cannot ignore it - Digital influences are an important part of a child's ecosystem/culture
- It influences their developmental, educational and health outcomes
- Could be a more engaging way to improve mental health
- Offers teachers evidence-based wellbeing information / interventions
- Offers easy opportunities for monitoring wellbeing outcomes
- What if we used technology for good
 - Apps
 - Psycho-education and elearning
 - Simulation
 - Serious games

What is digital mental health approach?

eHealth

“A psychological digital approach is any practice which uses health technologies to enhance our work with organisations, networks, families, couples and individuals, to improve wellbeing”

Burbach & Pote (2021)

What is an education technology approach?

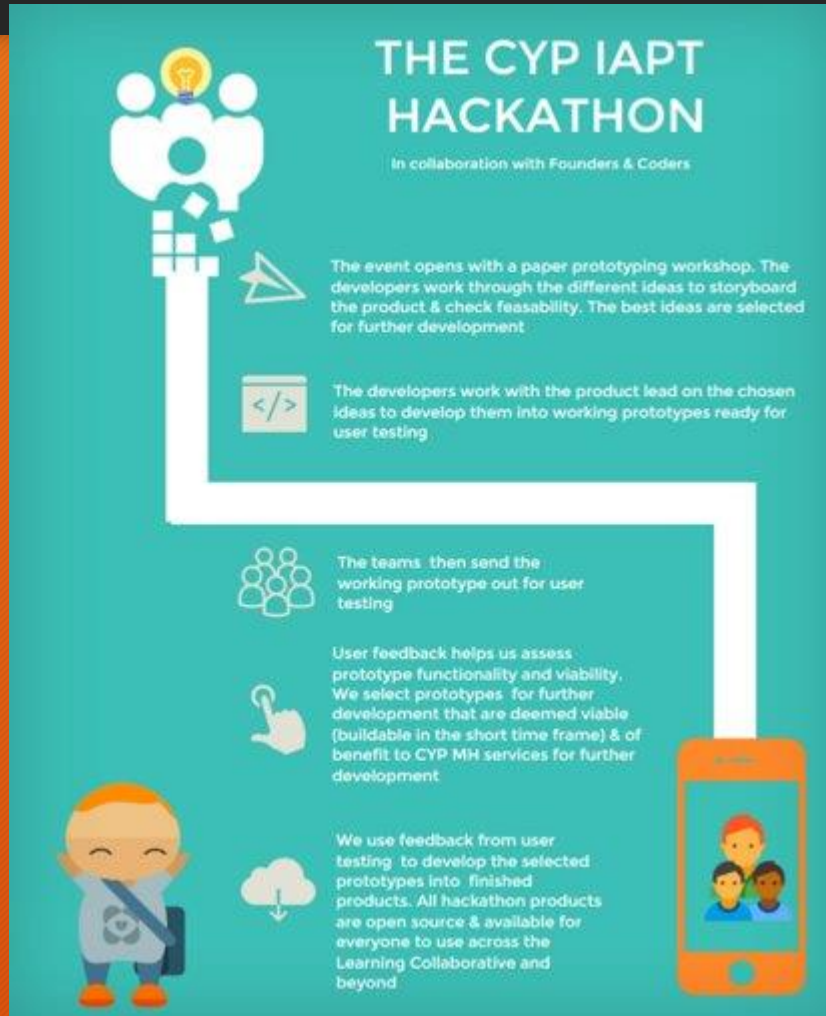

EdTech

“The practice of using technology to support teaching and the effective day-to-day management of education institutions. It includes hardware (such as tablets, laptops or other digital devices), and digital resources, software and services that help aid teaching, meet specific needs, and help the daily running of education institutions (such as management information systems, information sharing platforms and communication tools).”

DfE, 2019

A Fortuitous Invitation: Hackathon

THE CYP IAPT HACKATHON
In collaboration with Founders & Coders

The event opens with a paper prototyping workshop. The developers work through the different ideas to storyboard the product & check feasibility. The best ideas are selected for further development

The developers work with the product lead on the chosen ideas to develop them into working prototypes ready for user testing

The teams then send the working prototype out for user testing

User feedback helps us assess prototype functionality and viability. We select prototypes for further development that are deemed viable (buildable in the short time frame) & of benefit to CYP MH services for further development

We use feedback from user testing to develop the selected prototypes into finished products. All hackathon products are open source & available for everyone to use across the Learning Collaborative and beyond

The infographic features a teal background with white text and icons. At the top left is a lightbulb icon above a group of people. A white line graphic connects the text blocks. At the bottom left is a cartoon child icon, and at the bottom right is a smartphone icon displaying a group of people.

Digital approach across a range of needs/services

World Innovation Summit for Health Report (2020)

Digital Mental Health as a Choice

Of those who had been offered mental health support by phone or online, 1,094 (80%) took up this offer, and 14% did not take up the offer (others preferred not to say). Types of support people received:

Phone calls

75%

Video calls

39%

Online therapy programmes / apps

26%

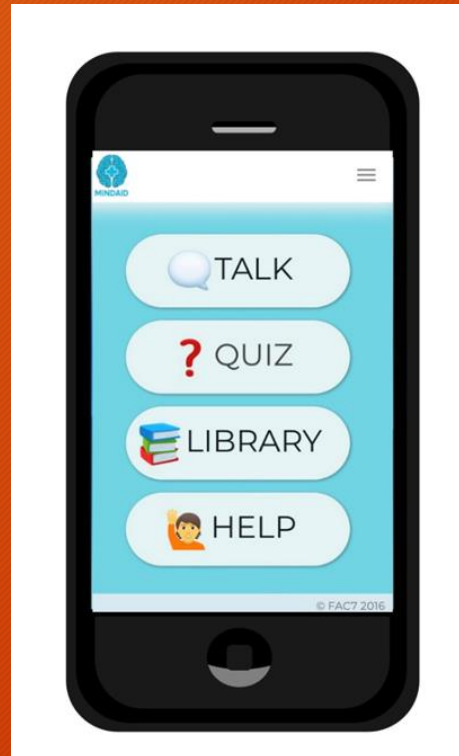

Text support

12%

Example 1: Mental Health Literacy App

Young people like using apps

OfCom 2024

Mental Health Literacy

- “Knowledge and beliefs about mental health difficulties which aid their recognition, management or prevention” Jorm, 1997, p.182.
- Aims to address barriers to mental health help-seeking in youth
- perceived stigma & embarrassment,
- problems recognising symptoms
- preference for self-help and informal support

MINDAID

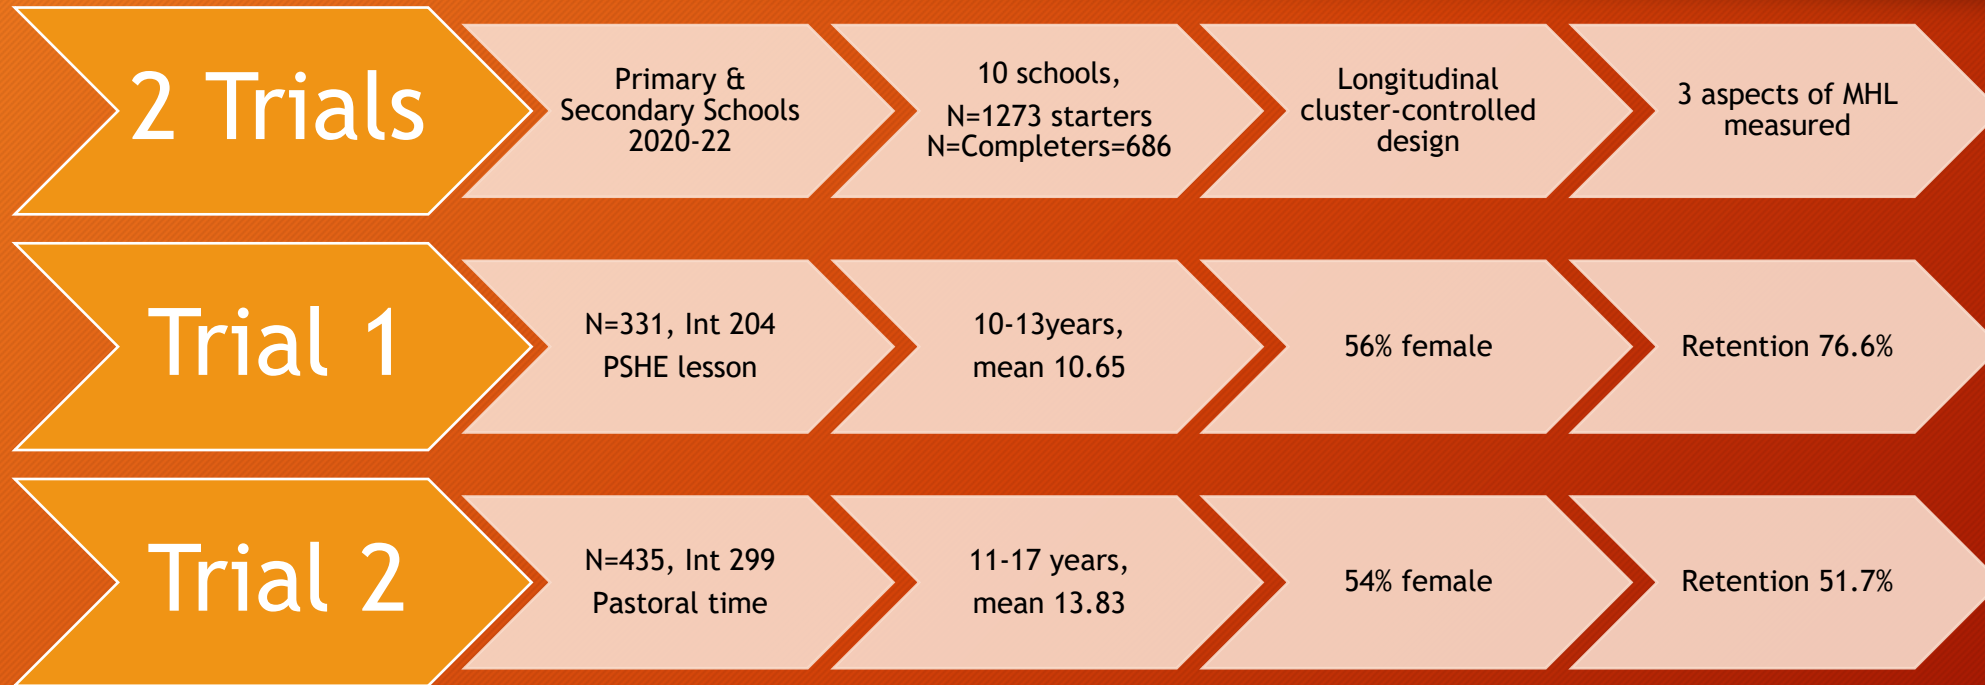

www.mindaaid.org

Mental Health Literacy App to a resource to support teachers and CYP to recognise and respond to mental health problems

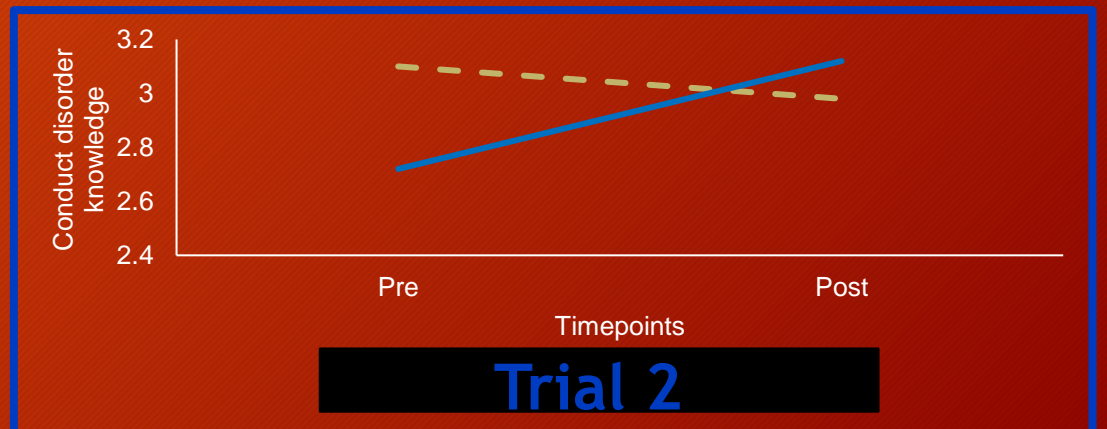

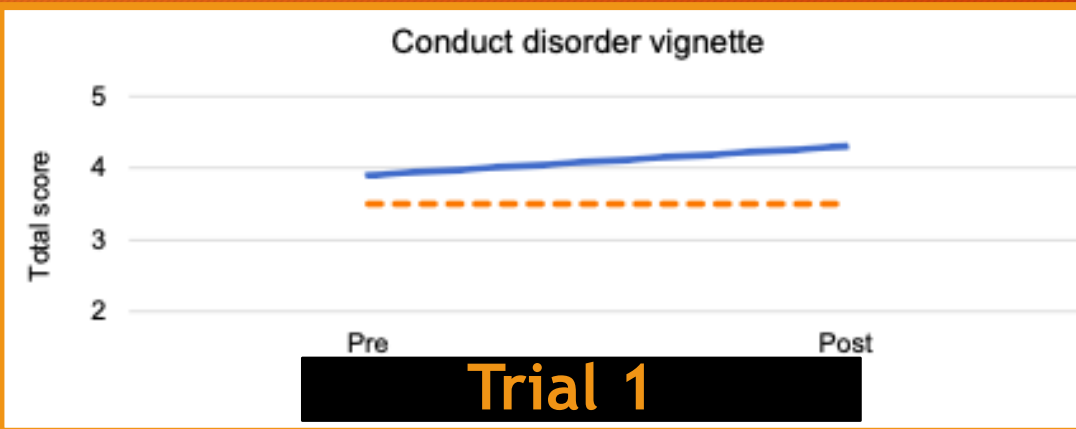

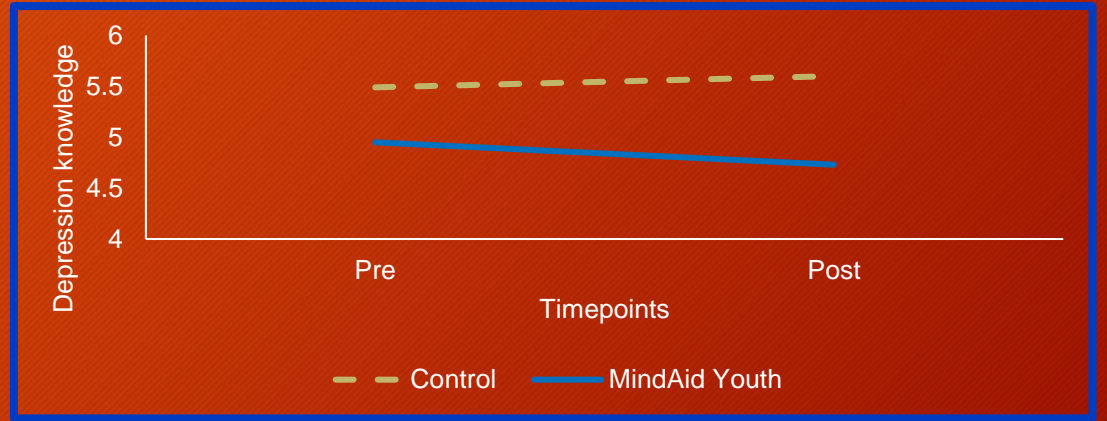

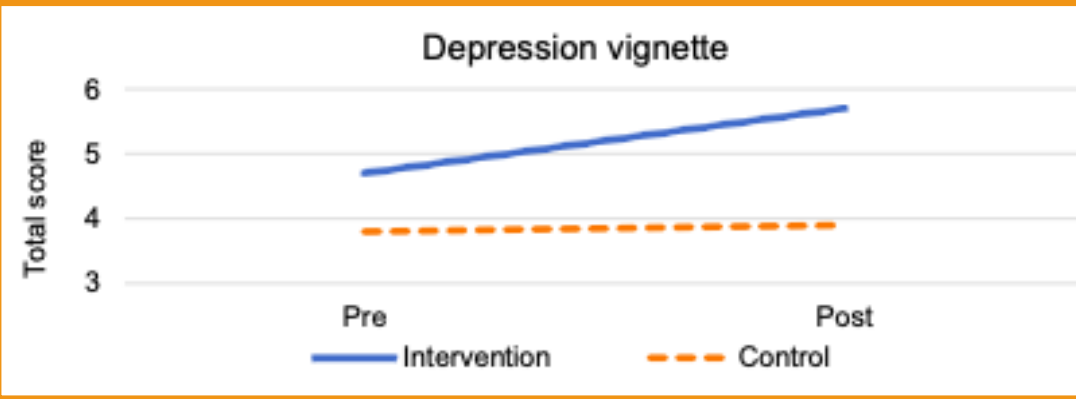

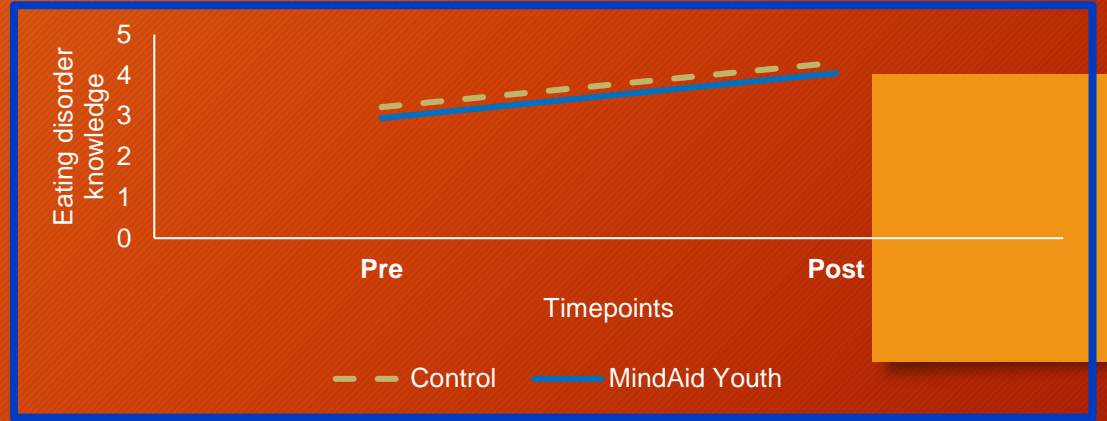

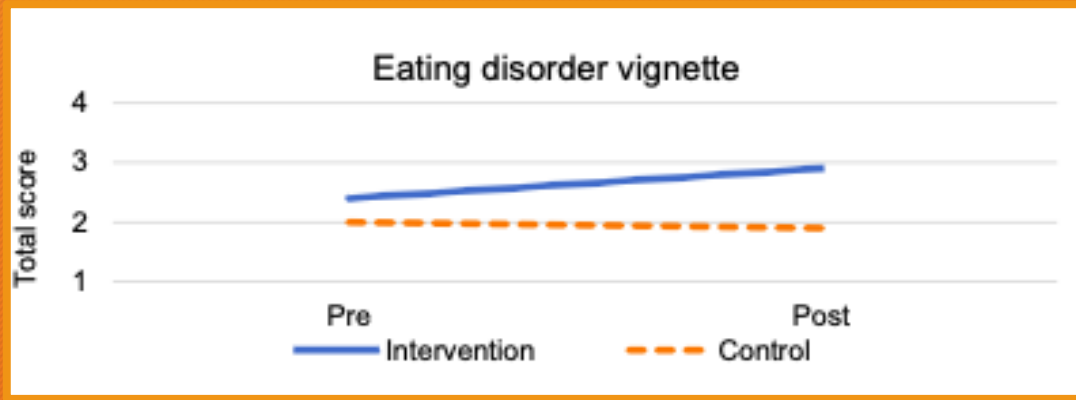

- **Talk:** information and interactive exercises about how to ask for help, support friends and discuss worries.
- **Quiz:** quizzes to check-in with mental wellbeing, identify any difficulties and challenge mental health related stigma.
- **Library:** 12 modules about different aspects of mental health, getting help and initial self-help suggestions.
- **Help:** details of local organisations which can provide appropriate support (using GPS technology) and further self-help information.

MindAid Youth: 2 Trials in primary & secondary

Pote, Bemrose & Good (2022)

Conclude

MindAid Youth improved younger children's mental health **KNOWLEDGE**
Youth engagement was high in the short term
We need further studies: randomized with improved measures and better retention

Reflect

Young people's experiences of using the product was positive
Consider if there are critical ages for digital intervention for MHL

Future

Need for more interactivity to achieve improvements beyond knowledge-based improvements
A blended approach to MHL interventions may be necessary

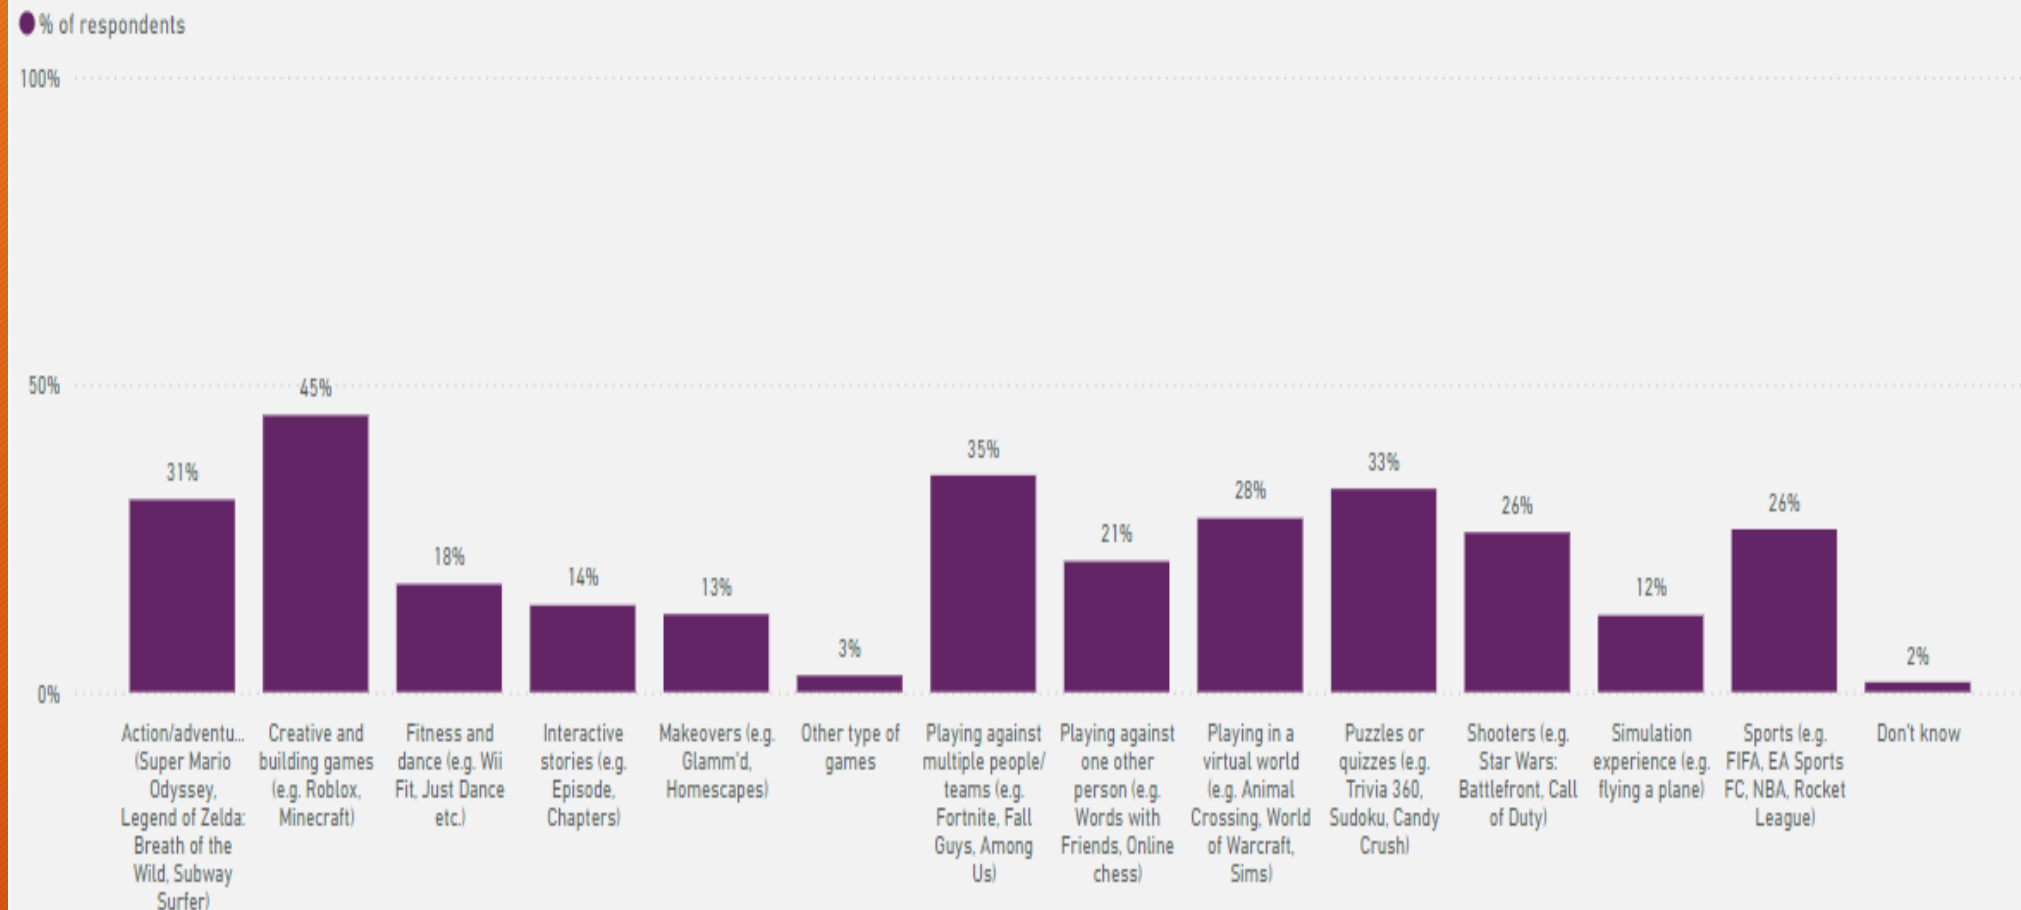

Example 2: Wellbeing Augmented Reality Board Game

Young people are engaged in gaming

Ofcom 2024,

QP24/ G2. Which of the following types of games do they play?

Gaming is surprisingly social...

Serious games might improve adolescent health?

21 studies on games for 'healthy lifestyle' 'sexual health' and 'substance use'

Several studies demonstrate serious games can be engaging and pedagogically effective as a learning device and short term behaviour change

Health outcomes were harder to determine and not well measured and limited follow-ups

High-quality evidence is essential to the ongoing acceptance and use of these serious games as part of the school curriculum

Andrew et al. (2022)

Game evidence from large national Youth MH trials: SPARX

- SPARX is a tried and tested method of e-therapy, providing effective help with feelings of moderate anxiety and depression
- Developed by Sally Merry and team in New Zealand and rolled out nationally free to all CYP
- CBT informed
- Multiple positive outcome trials since 2012

Dragons of Afterlands

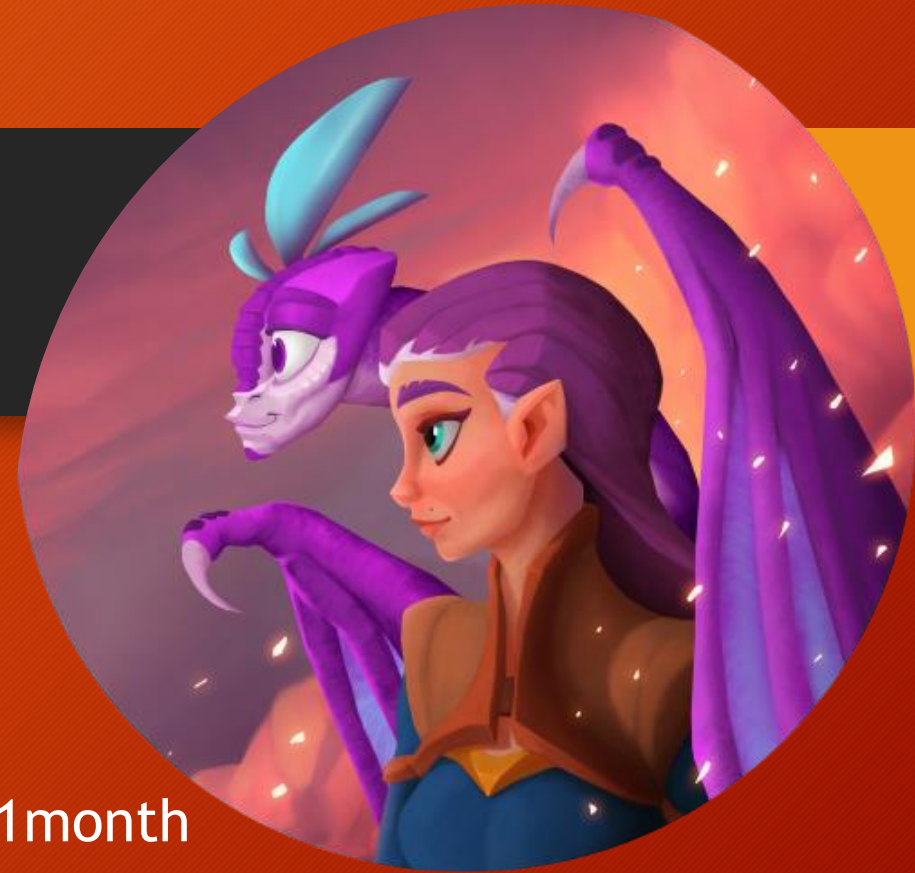

Play Well
for Life

- An immersive, interactive, multi-player AR board game
- It aims to improve wellbeing in young people, across physical, social, emotional and cognitive realms. 4 Dragon worlds with tasks.
- It can be played in person, remotely or hybrid.
- Co-developed with YP & a multidisciplinary team
- Grounded in evidence-based psychological theory

Dragons of Afterlands Trial

- Two-arm cluster trial over 5 weeks
- 2 schools
- Game play vs PHSE lesson as usual
- N= 71 adolescent girls 11-13yrs
- Wellbeing outcomes compared pre /post /follow-up @1month
- Wellbeing outcomes (WEMWBS and WHO-5)
- Mechanisms of change; emotional awareness, emotional regulation, cognitive awareness, and social problem solving
- Qualitative Grounded Theory analysis on game experience and change from young people

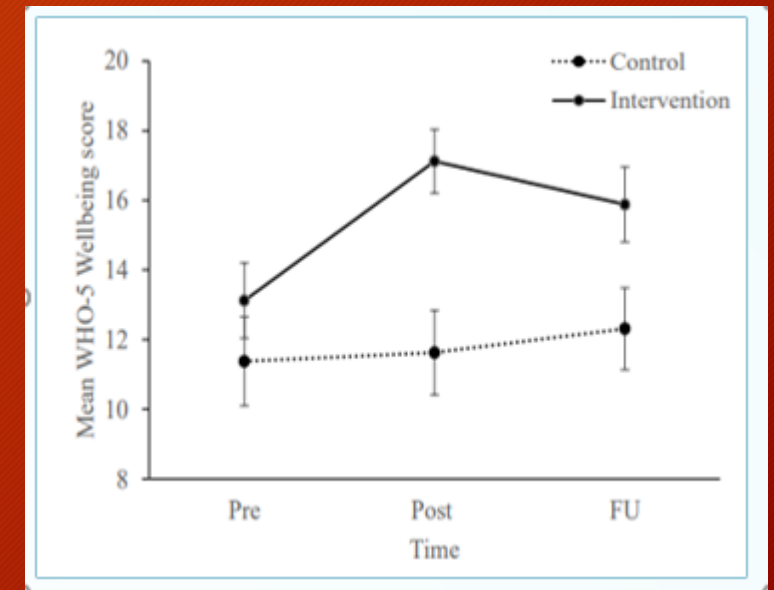

Clark, Rubio, Pote & Campbell (2024)

Results

- Wellbeing Improvement: Adolescents playing the AR game reported significantly higher wellbeing scores post-intervention compared to the non-gaming control group on both WEMWBS and WHO-5.
- The effects of the intervention waned over time - declining at follow up
- Gameplay led to improved wellbeing through improvements in emotion awareness and emotion regulation skills

Factors that may influence engagement and change

Psychological mechanisms of change that may promote wellbeing

INHIBITORS

e.g., not believing game will help

e.g., too many people, others disrupting play

e.g., technical issues, unrelatable content

e.g., practical issues, time constraints

FACILITATORS

Intrapersonal
e.g., curiosity & seeking novelty

Interpersonal
e.g., meeting people and making friends

Intervention
e.g., AR, interactivity, challenge, rewards

Environment
e.g., comfortable atmosphere, feeling safe

PLAYING THE GAME

- Socialising
- Teamwork
- Play
- Respite
- Changing viewpoints
- Storytelling
- Having options

+/- reinforcement

PROMOTING WELLBEING

Social connection, self-disclosure and feeling supported

Generating positive affect & reducing negative affect

Perspective taking and reflection

Improving communication & confidence

Emotional awareness and controllability

Problem solving skills

Reflection and join us:

- What are your immediate reactions to games like DoA?
- What would prevent you from using a DoA within your school / service?
- Would you like to offer feedback to shape DofA V2?

Barriers to EdTech in Schools

- Limited IT Infrastructure - poor internet connectivity
- Staff digital Capability & Skills
- Staff attitudes
- Parental caution
- Concerns about privacy, safety and data security
- School educational priorities
- Procurement Capabilities

Facilitators to Mental Health EdTech in Schools

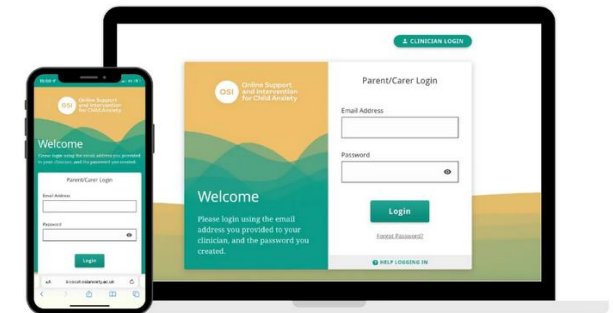

- Clear tech strategy in school
- Integrating technology into the curriculum - what is taught, how it is taught
- Shifting teacher - student roles
- AR create immersive learning experiences
- AI personalisation of student experience
- Platforms connecting students and educators (across borders)

Importance of using quality digital products

- NICE approved
- NHS & Social Care evaluations of digital interventions - DTAC
- <https://transform.england.nhs.uk/key-tools-and-info/digital-technology-assessment-criteria-dtac/>

Digital Technology Assessment Criteria (DTAC)

Two digital tools were recommended for use in the NHS to help children and young people with symptoms of anxiety or low mood.

Online Support and Intervention for Child Anxiety (OSI) and **Online Social anxiety Cognitive therapy for Adolescents (OSCA)** were among four digital tools recommended for use in the NHS.

The recommendation, from an independent NICE (National Institute for Clinical Excellence) committee, is the first ever published as part of the NICE new Early Value Assessment (EVA) for medical technologies.

Cathy Creswell, Professor of Developmental Clinical Psychology at the Department of Psychiatry and Department of Experimental Psychology, who led the development of OSI, said:

Importance of training teachers

- In health settings, educating and supporting staff to use and implement digital health interventions has been critical to success
- The same is needed for teachers and education staff
- Interesting approaches in Scotland - Teacher Digital Skills Toolkit - to help teachers evaluate their own digital literacy skills and identify strengths or next steps for developments
